

How to setup

1. Extract the zip file to a folder in www root such as “phpGrid_DB2”.
2. You will need to update the constant settings in conf.php in the root folder.

```
define('PHPGRID_DB_HOSTNAME', '*LOCAL');  
define('PHPGRID_DB_USERNAME', '');  
define('PHPGRID_DB_PASSWORD', '');  
define('PHPGRID_DB_NAME', 'SAMPLE');  
define('PHPGRID_DB_TYPE', 'db2');  
define('PHPGRID_DB_OPTIONS', serialize(array('i5_lib' => 'SAMPLE', 'i5_naming' =>  
DB2_I5_NAMING_ON)));
```

PHPGRID_DB_HOSTNAME is the name of the host.

PHPGRID_DB_USERNAME is the database user name

PHPGRID_DB_PASSWORD is the database user password

PHPGRID_DB_NAME is the database/schema name

PHPGRID_DB_TYPE can be one of the two following values:

- db2
- db2-dsn

PHPGRID_DB_OPTIONS is the options parameter from db2_connect (<http://php.net/manual/en/function.db2-connect.php>). This value is optional.

3. The examples are under **examples** folder.
4. Visit http://<DOMAIN_NAME>/phpGrid_DB2/examples/
